PROFESSIONAL SUMMARY

Software Development Engineer in Test (SDET) with 4+ years of experience in test automation, manual testing, API testing, and quality engineering for enterprise and product-based applications. Hands-on expertise in Selenium WebDriver, Cypress, Java, JavaScript, TestNG, Rest Assured, Jenkins CI/CD, AI-powered test tooling, and Agile delivery. Led end-to-end quality initiatives, mentored teammates, and drove test strategy across cross-functional teams. Proven outcomes include a **20%** increase in automation coverage, validation of **400+ features**, and faster defect detection through shift-left testing and multi-environment release validation.

TECHNICAL SKILLS

Test Automation	Cypress (JavaScript), Selenium WebDriver (Java), TestNG, JUnit, Page Object Model (POM), Data-Driven Testing
API Testing	Rest Assured, Postman, Swagger, REST, SOAP, API Validation, Contract Testing
AI & GenAI	AI-powered test agents, LLM-based automation, GenAI triage workflows, prompt engineering for QA
CI/CD & DevOps	Jenkins, CI/CD Pipelines, Kubernetes, AWS, Git, GitHub, Maven, NPM
Test Management	JIRA, X-Ray, Zephyr, Extent Reports, Test Plan & Strategy, Defect Lifecycle Management, Agile Scrum
Databases	SQL, Oracle, Snowflake, MongoDB, DBEaver
Languages	Java, JavaScript, HTML, CSS

PROFESSIONAL EXPERIENCE

QA Specialist | Servigistics R&D; Team May 2024 – Present
PTC Inc. (Global PLM, CAD, IIoT, SLM, AR & ALM Leader)

- Designed UI automation suites in Selenium + JUnit/TestNG covering Sanity, Regression, Smoke & Functional cycles, improving throughput by **25%**.
- Automated API validation via Rest Assured & Postman, expanding service-level coverage to **50+ critical endpoints** across the Servigistics platform.
- Provisioned QA instances on Kubernetes with SQL, Oracle & Snowflake configs across Windows/Linux, supporting **10+ active environments**.
- Developed a Jenkins auto-upgrade workflow & dashboard, cutting manual maintenance effort by **40%** and improving environment stability.
- Pioneered** AI-powered agents for automated JIRA ticket creation from test failures, cutting manual defect logging time by **60%**.
- Led the design** of GenAI triage workflows to auto-classify failures (product defect / script issue / Snowflake), boosting triage speed by **50%**.
- Spearheaded** an LLM-based helper agent for locator suggestions & script scaffolds, accelerating script authoring by **30%**.
- Integrated suites into CI/CD pipelines with shift-left practices, reducing defect turnaround time by **20%**.

Sr. Software Test Engineer Jul 2022 – May 2024
Mind Fire Digital

- Automated testing for FDA-cleared arterial analysis software using Cypress; strengthened cloud-based execution through AWS-backed CI/CD.
- Built Selenium automation for e-commerce workflows, increasing test coverage and execution reliability by **20%**.
- Implemented POM and data-driven frameworks; validated **100+ new features** across UI, API, and end-to-end scenarios.
- Executed **20+ smoke tests** per build and drove regression coverage across QA, UAT, and Production, reducing issue resolution time by **10%**.
- Improved defect discovery by **~15%** through structured regression analysis and risk-based test prioritization.
- Partnered with **5 cross-functional Agile teams**; owned test plan and strategy for each release using JIRA and X-Ray.

Programmer Analyst (QA / Test Automation) Dec 2021 – Jul 2022
Cognizant Technology Solutions

- Maintained and executed **150+ test cases** across functional and regression cycles for 3 product releases, achieving **zero critical escapes** to production.
- Authored test plans, reports, and defect documentation for **4 stakeholder teams**, reducing communication back-and-forth by **30%**.
- Improved defect transparency by maintaining structured defect logs and release notes shared across all **4 teams** each sprint.
- Collaborated with **3 cross-functional teams** to triage and validate fixes across 2 agile sprints per month, consistently meeting release deadlines.

PROJECTS

UI Automation Framework Development Framework Engineering Project

- Designed a reusable Selenium + TestNG framework using Page Object Model, utility wrappers, and centralized config management.
- Implemented data-driven execution, reusable locator strategies, and synchronization helpers to improve stability and maintainability.
- Integrated Extent Reports and structured logging for faster failure analysis and actionable defect evidence.
- Reduced script onboarding time by standardizing framework templates and coding conventions across all test suites.

API Automation Framework with CI/CD Integration Framework Engineering Project

- Developed a scalable API automation framework using Rest Assured with modular request builders, schema validation, and reusable assertion libraries.
- Created environment-aware test execution with secure config management across Dev, QA, UAT, and pre-production systems.
- Integrated API and UI suites into Jenkins CI/CD pipelines with scheduled/nightly execution, build gates, and failure notifications.
- Improved release confidence through regression checks and rapid feedback loops in pull request and deployment workflows.

AI-Powered JIRA Agent and Automation Triage AI / GenAI Automation Project

- Built an AI-powered JIRA agent using LLM-based tooling for ticket creation, updates, and intelligent search from test failure context.
- Developed GenAI triaging workflows that consume pipeline results and route failures to the correct owning team automatically.
- Auto-generated team-wise defect tickets with logs, failure signatures, impacted components, and suggested next actions.
- Accelerated defect handling by reducing manual triage effort and improving first-response quality for failed builds.
